COLLATERAL RISK MONITORING / CONTENT PLAN 001

CATCH STALE ORACLES BEFORE THEY CATCH YOU.

A 15-day campaign for **Collatera**: 20 deliverables across posts, SaaS motion videos and short articles, with copy, captions and generation prompts for each.

7 VIDEOS | 8 POSTS | 5 ARTICLES | 15 DAYS

Campaign window: Tue 27 Oct – Tue 10 Nov 2026 · Prepared 25 Oct 2026 · Sources: collatera.buzz, @collatera_io bio, brand assets supplied by the client.

ONE MESSAGE, FOUR PILLARS.

CORE MESSAGE

Catch stale oracles before they catch you. Collatera shows tokenized-asset price, oracle freshness and your liquidation line side by side, read-only, with no keys and no signatures.

THE PROBLEM

Stale oracles, closed markets, overnight gaps. Why tokenized-stock collateral needs its own risk view.

THE PRODUCT

Terminal, position health (buffer, oracle age, LTV), the monitor → stress test → alerts → preview flow.

THE ECOSYSTEM

Where tokenized collateral lives: Aave, Euler, Morpho, Sentora, Robinhood Chain. Coverage targets, not partners.

THE PRINCIPLES

Read-only. No keys. No signatures. Monitoring first, automation later. A token is a proposal, not a promise.

GOALS

GOAL	HOW	KPI TO TRACK
Awareness	Launch video + poster, daily posting on X	Impressions, follower growth on @collatera_io
Understanding	Explainer carousel, articles, product videos	Saves, bookmarks, article read-through
Demo visits	CTA to collatera.buzz/app in videos and articles	Link clicks, demo sessions, addresses watched
Trust	Read-only and roadmap honesty content	Replies and quote-posts, sentiment

CONTENT MIX: 20 DELIVERABLES

TYPE	COUNT	FORMAT	STYLE
VIDEO	7	20-30 s SaaS motion films, 16:9 + 9:16 cuts	Locked whatships references only: Supabase, Notion AI, Krea 3, Conqueror, Acceternity
POST	8	4:5, 1:1, 16:9 stills and one carousel	Pixel-terminal brand system (as on the site)
ARTICLE	5	≈300-word posts for X Articles, Medium, LinkedIn and the blog	Plain, calm, factual founder voice

LOOK, VOICE, RULES.

PALETTE

- NIGHT #002A1F
- EVERGREEN #003D2D
- FOREST #004B35
- LIME #75FF00
- CHARTREUSE #A4FF2B
- MINT #D8FFE0
- SAGE #86B99A
- PAPER #EDF7EA

TYPE & SHAPES

SILKSCREEN
Display and headlines, uppercase pixel type (lookalike of the site's font)

JetBrains Mono
Body, data, labels

Inter
Video captions in the reference styles

Bordered panels · offset dark pixel shadow · dotted grid · lime CTA buttons · the 12×11 pixel mascot

VOICE

Short, calm, precise. Lead with the risk, then the view. Use the site's own phrases: "Catch stale oracles before they catch you." · "Watch the price. Watch the oracle." · "Know what changed before you act." · "Markets close. Loans don't." · "Monitoring first. Automation later."

MOTION RULE

All videos use the locked whatships house style (docs/reference/whatships/STYLE.md): blur-in type, word swaps, rebuilt clean UI, cursors, tinted plates, smooth camera, logo end. No glitch, neon, ray-burst or pixel-noise effects.

ACCURACY & COMPLIANCE (NON-NEGOTIABLE)

- Only claim what the site says. V1 = read-only monitoring of **one demo vault** modeled on Algorand lending markets. No keys, no funds moved, no automatic execution.
- Never say Collatera prevents or guarantees protection from liquidation. "Improves risk awareness."
- Terminal numbers are **simulated**. Keep the "SIMULATED DATA" label on every UI shot.
- Aave, Euler, Morpho, Sentora and Robinhood Chain are **coverage targets, not partners**. No @-tags, no logos implying endorsement.
- Token: "a proposal, not a promise". No price, yield, airdrop or launch-date talk. Keep "Tokens do not guarantee returns or value."
- Alerts, stress tests and repayment previews are shown on the site as the product flow. **Confirm which are live** before presenting them as available.
- Add "Not financial advice." to articles and any post that discusses positions.

VIDEO

V1 INTRODUCING COLLATERA

CHANNELS	X (pinned) · LinkedIn · Instagram Reels
FORMAT	25 s · 16:9 1920×1080 + 9:16 cut · 60 fps
STYLE / REF	SUPABASE MIDDLEWARE (locked ref #5)
OBJECTIVE	Launch the brand. One clear line: what Collatera watches, and that it is read-only.

SHOT LIST

0–1 s	Black-green canvas. 'Introducing' resolves letter by letter (blur → sharp).
1–2.5 s	'Introducing' shrinks up; 'Collatera' resolves below in the pixel display font. The mascot tile pops in to the left.
2.5–5 s	Title slides left. The terminal window slides in from the right; 'ORACLE STALE' and 'Oracle age 89 min' rows get a lime highlight bar.
5–9 s	'Watch the [price → oracle → buffer → LTV]': only the last word swaps (blur cross-fade) while an icon reel rolls on the right.
9–12 s	'…for tokenized stocks & ETFs': tQQQ, tSPY, tAAPL, tNVDA and tTSLA ticker tiles burst out into a constellation.
12–15 s	'Comes with one focused view': a 3-card grid (Collateral health / Freshness checks / Liquidity risk) staggers in, then the middle card highlights.
15–19 s	The terminal in 3D perspective (~20° tilt) with lime annotation pills: 'Buffer 14.7%', 'Oracle age 89 min', 'LTV 39.8%'. Labelled SIMULATED DATA.
19–22 s	'Read-only. No keys. No signatures.' One phrase at a time.
22–25 s	'Try the demo' above a URL bar typing 'collatera.buzz/app' with a caret. Mascot + wordmark, then black.

AUDIO — Original chill electronic, ≈80 BPM, soft UI ticks on each swap, a resolving chord at 22 s. -14 LUFS.

CAPTION

Catch stale oracles before they catch you. 👾

Introducing Collatera: read-only collateral risk monitoring for DeFi loans backed by tokenized stocks & ETFs.

No keys. No signatures.
→ collatera.buzz

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
Using the claudemotion repo and the locked whatships house style, build a 25 s 1920×1080 60 fps composition 'CollateraIntro' that recreates the Supabase Middleware reference shot for shot (docs/reference/whatships/ANALYSIS.md §5) for Collatera. Brand: background #002A1F/#003D2D, accent lime #75FF00, mint #D8FFE0, Silkscreen display font + JetBrains Mono, pixel mascot from src/compositions/Collatera/components/Mascot.tsx. Shots: [paste the shot list above]. Use only STYLE.md vocabulary (letter blur-in, word swap + icon reel, code-window highlight bars, annotation pills, 3D-tilted panel, type-on URL, logo end). Rebuild the terminal from src/compositions/CollateraLaunch/Shots.tsx and keep the 'SIMULATED DATA' label. Original ≈80 BPM score via scripts/*/generate_audio.py. Render 1080p60 plus a 9:16 cut.
```

> Terminal values are the site's simulated demo data. Keep the label visible.

POST

P1 LAUNCH POSTER

CHANNELS	X · LinkedIn · Instagram
FORMAT	16:9 3840×2160 + 4:5 2160×2700
STYLE / REF	Static · brand poster
OBJECTIVE	Hero image for launch day, paired with V1.

ON-IMAGE COPY

CATCH STALE ORACLES / BEFORE / THEY CATCH YOU. · READ-ONLY · NO KEYS · NO SIGNATURES · COLLATERA.BUZZ

CAPTION

Catch stale oracles before they catch you. 👾

Collatera monitors collateral risk across DeFi and tokenized assets.
Real-time signals. Smarter risk decisions.

collatera.buzz

IMAGE GENERATION PROMPT

Pixel-art fintech poster, deep forest-green background (#002A1F) with a faint dotted grid, a glowing lime (#75FF00) 12×11 pixel mascot (a blocky creature with a crown of three pixels, a square eye and a mouth slit) on the right. Large blocky pixel headline on the left: 'CATCH STALE ORACLES BEFORE THEY CATCH YOU.', last line in lime. Below it a dark trading-terminal panel tilted in 3D showing a candlestick chart and order book. Crisp, flat, no gradients except a soft lime glow, retro-terminal aesthetic, 16:9.

Already produced: deliverables/collatera-poster-16x9-4k.jpg and collatera-poster-4x5.jpg.

POST

P2 WHAT IS A STALE ORACLE? (CAROUSEL)

CHANNELS	X thread · Instagram/LinkedIn carousel
FORMAT	5 slides · 4:5 2160×2700
STYLE / REF	Static · carousel
OBJECTIVE	Educate: define the core risk in plain words.

ON-IMAGE COPY

1 'YOUR ORACLE SAYS FINE. IT'S STALE.' · 2 'AN ORACLE REPORTS THE PRICE YOUR LOAN USES.' · 3 'IF THE FEED LAGS, YOUR HEALTH LOOKS BETTER THAN IT IS.' · 4 'TOKENIZED STOCKS ADD CLOSED MARKETS AND OVERNIGHT GAPS.' · 5 'COLLATERA SHOWS PRICE, ORACLE AGE AND YOUR LIQUIDATION LINE SIDE BY SIDE.'

CAPTION

What's a stale oracle, and why should you care? 🧵

Your loan's health is only as fresh as the price it reads.
Here's the 30-second version 👇

IMAGE GENERATION PROMPT

Five-slide 4:5 carousel in a retro pixel-terminal style. Forest-green (#002A1F) background with a dotted grid, blocky pixel headlines in mint (#D8FFE0) with a lime (#75FF00) accent line, monospace body text, slide number '0X / 05' top right. Slide 1 on a light mint paper background (#EDF7EA) with dark green type. Simple diagrams: a price line vs a lagging stepped oracle line, a clock icon, a dashed red liquidation line.

Educational. Avoid saying 'you will be liquidated'.

ARTICLE

A1 WHY TOKENIZED-STOCK COLLATERAL NEEDS ORACLE FRESHNESS CHECKS

CHANNELS	X Article · Medium · LinkedIn · blog
FORMAT	≈300 words · header image 16:9
STYLE / REF	Article
OBJECTIVE	SEO and education anchor for the 'stale oracle' theme.

DRAFT

WHY TOKENIZED-STOCK COLLATERAL NEEDS ORACLE FRESHNESS CHECKS

A DeFi loan doesn't see the market. It sees the oracle: the feed that tells the protocol what your collateral is worth. Most of the time the two agree. When they don't, your position can look healthier than it is.

Tokenized stocks and ETFs make this harder. The underlying exchanges close at night and on weekends, issuers have corporate events, and liquidity can thin out fast. An oracle can keep reporting a price that's minutes or hours old while the real-world asset is already moving.

That's what 'stale' means: not wrong on purpose, just late. A late price changes your buffer (the distance to your liquidation threshold) without anything on your screen telling you so.

A freshness check is simple in principle: show the price, show how old the oracle's last update is, and show your liquidation line next to both. If the oracle age is climbing while the market moves, you know to look closer before you act.

Collatera puts those three things side by side for supported DeFi loans backed by tokenized stocks and ETFs, starting with a read-only demo vault modeled on Algorand lending markets. No keys, no signatures, no automatic execution. It improves awareness; it doesn't promise protection.

Catch stale oracles before they catch you.

Not financial advice.

CAPTION

New post: why tokenized-stock collateral needs oracle freshness checks. 📖

Your loan reads the oracle, not the market. Here's why that matters ↓

WRITING PROMPT

```
Write a ~300-word article for DeFi users titled 'Why tokenized-stock collateral needs oracle freshness checks'. Plain, confident, no hype. Explain what an oracle is, what 'stale' means, why closed markets and corporate events make tokenized stocks different, and what a freshness check shows (price, oracle age, liquidation line). End by introducing Collatera as read-only monitoring (no keys, no signatures) starting with one demo vault modeled on Algorand lending markets. Don't claim it prevents liquidation. Close with 'Catch stale oracles before they catch you.'
```

Add 'Not financial advice.' at the end when publishing.

VIDEO

V3 WATCH THE PRICE. WATCH THE ORACLE.

CHANNELS	X · Instagram Reels
FORMAT	20 s · 16:9 + 4:5 · 30 fps
STYLE / REF	KREA 3 (locked ref #1)
OBJECTIVE	Show the core insight: price and oracle freshness are different things.

SHOT LIST

0–2 S	'Oracle' assembled from mismatched ransom-note letters (pixel, serif, mono, outlined), surrounded by floating tiles (tQQQ, tSPY, clock, chart). Letters snap into clean Silkscreen.
2–5 S	'Watch the price.' reflows up; 'Watch the oracle.' types below. A bar chart grows of oracle age per asset (illustrative). One bar fills lime and the cursor drags it taller: '89 min'.
5–8 S	A cursor pill labelled 'Oracle age' grows big, then shrinks to a node. A dashed line draws to a 'Last trade' node: 'Price moved. Oracle didn't.'
8–12 S	A scatter of price vs time with the dotted liquidation line at 412.50. A green 'Buffer 14.7%' region fills, then shrinks as the stale gap grows (simulated).
12–16 S	Position health card in the leaderboard style: Buffer / Oracle age / LTV rows. The 'Oracle age' row is highlighted black-lime with the cursor on it.
16–18 S	'Frontier' → 'Freshness checks' over drifting ticker tiles.
18–20 S	Mascot centred on mint, then black.

AUDIO — Original electronic ≈120 BPM, sparse intro, groove from 5 s. -14 LUFS.

CAPTION

Watch the price. Watch the oracle. 🟩

Tokenized-asset price, oracle freshness and your liquidation line, side by side.

Simulated data · collatera.buzz

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
In claudemotion, build 'CollateraOracle' (20 s, 1920×1080, 30 fps) recreating the Krea 3 reference (ANALYSIS.md §1) for Collatera: a ransom-note font-swap title, a bar chart with a cursor-dragged bar, a node + dashed line, a scatter chart with a filling region, and a leaderboard-style position health card. Brand palette and fonts as in src/compositions/Collatera/brand.ts. All values SIMULATED. Original 120 BPM score.
```

> Values from the site's simulated terminal: Liquidation 412.50, Buffer 14.7%, Oracle age 89 min, LTV 39.8%.

POST

P3 POSITION HEALTH, EXPLAINED

CHANNELS	X · Instagram
FORMAT	4:5 2160×2700
STYLE / REF	Static · UI card
OBJECTIVE	Explain the three numbers in the position health panel.

ON-IMAGE COPY

POSITION HEALTH · BUFFER 14.7%: DISTANCE TO LIQUIDATION · ORACLE AGE 89 MIN: HOW OLD THE PRICE IS · LTV 39.8%: BORROWED VS COLLATERAL · SIMULATED DATA

CAPTION

Three numbers that tell you how close you are.

Buffer. Oracle age. LTV.

Collatera puts them side by side. (Simulated data shown.)

IMAGE GENERATION PROMPT

```
4:5 social card, forest-green pixel-terminal UI style. A large 'POSITION HEALTH' panel with three rows (Buffer 14.7%, Oracle age 89 min, LTV 39.8%) and a lime progress bar. Each row has a small annotation callout on the right explaining it in monospace. Small grey 'SIMULATED DATA' label. Mascot icon bottom right. Crisp, flat, retro.
```

> Values are the site's simulated demo values.

VIDEO

V2 KNOW WHAT CHANGED BEFORE YOU ACT

CHANNELS	X · LinkedIn
FORMAT	30 s · 16:9 1920×1080 · 24/30 fps
STYLE / REF	NOTION AI (locked ref #2)
OBJECTIVE	Explain the four-step flow: Monitor → Stress test → Get alerts → Preview repayment.

SHOT LIST

0–3 s	White-mint canvas. 'Your position.' then 'Now with a second pair of eyes.', with a hand-drawn lime underline under 'eyes'. Floating icon tiles (shield, clock, chart, bell, wallet) drift around the type.
3–5 s	'Know what changed before you act.' typed word by word.
5–8 s	Pale-green plate wipes up. A prompt-style input: 'Paste an Algorand address…' typed, then the WATCH button is clicked by a big cursor.
8–14 s	A checklist appends with a timer 'Watching for 4s / 9s / 14s': Reading position · Checking oracle age · Comparing to liquidation line · Stress-testing -10% · Checking market hours.
14–17 s	'[Stress test] shows the gap. You decide.' plus a scribble annotation with an arrow: 'PRICE DROPS · STALE FEEDS · OVERNIGHT GAPS'.
17–24 s	Peach plate: the scenario list rolls like a slot machine (-5% / -10% / -20% / feed 90 min stale / market closed). The label switches 'Simulating → Comparing'. All marked ILLUSTRATIVE.
24–27 s	'Preview repayment' card showing before → after buffer (illustrative), then a '✓ You confirm it yourself' pill.
27–30 s	Fast feature cards: 'Monitor' → 'Stress test' → 'Get alerts' → 'Preview repayment', then mascot + 'Collatera' wordmark.

AUDIO — Original ≈110 BPM: plucks, a silent beat at 17 s, 808 slides under the slot-roll, then a groove. -16 LUFS.

CAPTION

Know what changed before you act.

→ Monitor
→ Stress test
→ Get alerts
→ Preview repayment

Every decision stays in your hands. You confirm any repayment yourself.

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
In claudemotion, build 'CollateraFlow' (30 s, 1920×1080, 30 fps) recreating the Notion AI reference (ANALYSIS.md §2) shot for shot with Collatera's brand on light mint plates (#EDF7EA, #DDF5E3, #FCE9DC). Use WordType with blur, Scribble write-on, AgentChecklist with a timer, SlotList, PlateWipe, Cursor + ClickPulse and the logo end. Copy: [shot list]. Mark every number ILLUSTRATIVE. Original 110 BPM score (plucks → silence → 808 slides → groove).
```

> Confirm the alerts feature status before posting. The site lists it as a flow step; V1 is read-only monitoring of one demo vault.

POST

P4 KNOW WHAT BACKS YOUR POSITION

CHANNELS	X · LinkedIn · Instagram
FORMAT	4:5 2160×2700
STYLE / REF	Static · 3 cards
OBJECTIVE	The three risk lenses.

ON-IMAGE COPY

01 / BUFFER COLLATERAL HEALTH · 02 / PRICE FRESHNESS CHECKS · 03 / CLOSED MARKETS LIQUIDITY RISK

CAPTION

Know what backs your position.

01 Collateral health
02 Freshness checks
03 Liquidity risk

Read-only monitoring for DeFi loans backed by tokenized stocks & ETFs, starting on Algorand.

IMAGE GENERATION PROMPT

```
4:5 card with three stacked bordered panels on a forest-green dotted grid, offset dark pixel shadows, lime labels '01 / BUFFER', '02 / PRICE', '03 / CLOSED MARKETS', mint pixel titles, monospace descriptions, the middle panel highlighted with a lime border and glow.
```

Already produced: deliverables/collatera-posts/03-backs-your-position.jpg.

ARTICLE

A2 THE OVERNIGHT GAP: WHEN STOCK MARKETS CLOSE AND DEFI LOANS DON'T

CHANNELS	X Article · Medium · LinkedIn
FORMAT	≈300 words · header image
STYLE / REF	Article
OBJECTIVE	Own the 'closed markets' angle.

DRAFT

THE OVERNIGHT GAP: WHEN STOCK MARKETS CLOSE AND DEFI LOANS DON'T

Crypto never sleeps. Stock exchanges do. That mismatch is the whole story of the overnight gap.

When a tokenized stock is used as collateral, the loan lives on-chain around the clock, but the asset it represents has a home exchange with opening hours. Between the close and the next open, news still happens: earnings, guidance, macro data. The on-chain price can drift, freeze or depend on thinner liquidity.

When the exchange reopens, the real price can jump straight past levels your position was relying on. That jump is the gap, and a buffer that looked comfortable at the close might not be at the open.

Three questions are worth asking about any tokenized-collateral position: Is the underlying market open right now? How old is the oracle's last update? How much buffer would a gap of 5, 10 or 20 percent use up?

Collatera is built around those questions. It accounts for closed exchanges, overnight gaps and thinner liquidity, and lets you explore gap scenarios before you decide anything. It's read-only, and you confirm any repayment yourself.

Markets close. Loans don't.

Not financial advice.

CAPTION

Markets close. Loans don't. 🌙

New post on the overnight gap and what it means for tokenized-stock collateral ↓

WRITING PROMPT

Write a ~300-word article 'The overnight gap: when stock markets close and DeFi loans don't'. Explain the 24/7 vs exchange-hours mismatch, what a gap is, and three questions to ask (market open? oracle age? buffer under 5/10/20% gaps?). Introduce Collatera's closed-market and stress-test view, read-only, user confirms any repayment. No predictions, no advice.

Use example percentages only as hypotheticals.

POST

P5 MARKETS CLOSE. LOANS DON'T.

CHANNELS	X · Instagram
FORMAT	1:1 2160×2160
STYLE / REF	Static · statement
OBJECTIVE	Hook post on the closed-market / overnight-gap risk unique to tokenized stocks.

ON-IMAGE COPY

MARKETS CLOSE. / LOANS DON'T. · NYSE 16:00 → 09:30: THE GAP YOUR ORACLE CAN'T SEE (ILLUSTRATIVE TIMELINE)

CAPTION

Markets close. Loans don't. 🌙

Tokenized stocks trade on-chain 24/7, but the underlying exchange sleeps. Collatera accounts for closed exchanges, overnight gaps and thinner liquidity.

IMAGE GENERATION PROMPT

Square pixel-art poster split in two: left half a daytime lime-green city skyline with an 'OPEN' sign, right half a night forest-green skyline with a moon and a 'CLOSED' sign. A stepped price line across the middle with a highlighted gap in the night half. Big pixel headline 'MARKETS CLOSE. LOANS DON'T.' in mint and lime. Retro terminal style.

Keep the timeline generic and marked illustrative. Don't claim specific exchange behaviour for any token.

VIDEO

V6 BUILT AROUND THE LENDING STACK

CHANNELS	X · LinkedIn
FORMAT	20 s · 16:9 · 60 fps
STYLE / REF	SUPABASE MIDDLEWARE (locked ref #5)
OBJECTIVE	Explain where tokenized collateral lives, without implying partnerships.

SHOT LIST

0–2 S	'Built around the lending stack.' letter blur-in.
2–8 S	'Watch [LTVs → oracles → LLTV distance → curated markets] on [Aave → Euler → Morpho → Sentora]' with an icon reel of those logos on the right.
8–11 S	'…where tokenized collateral settles': all icons burst out; the Robinhood Chain card slides up (Settlement layer · chain ID 4663).
11–15 S	A 2×2 grid of venue cards with the site's one-line descriptions, each highlighting in turn.
15–18 S	The footnote animates in: 'Coverage targets shown with public data. Not affiliated with or endorsed by these projects.'
18–20 S	Logo end.

AUDIO — Original ≈80 BPM, chill, ticks on swaps. -14 LUFS.

CAPTION

Built around the lending stack.

Collatera tracks collateral risk across the markets and curators tokenized assets plug into.

Coverage targets, not partnerships. collatera.buzz

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
In claudemotion, build 'CollateraStack' (20 s, 1920×1080, 60 fps) in the Supabase Middleware reference style: WordSwap + IconReel with the venue names, a burst-out, card grid stagger, and a footnote fade. Use the venue descriptions verbatim from the site. Never tag or imply a partnership.
```

> Do not @-tag Aave, Euler, Morpho, Sentora or Robinhood. Third-party logos only in a factual 'coverage' context.

POST

P6 WHERE TOKENIZED COLLATERAL LIVES

CHANNELS	X · LinkedIn
FORMAT	16:9 3840×2160
STYLE / REF	Static · ecosystem map
OBJECTIVE	Ecosystem context; pairs with article A5.

ON-IMAGE COPY

AAVE · EULER · MORPHO · SENTORA → TOKENIZED COLLATERAL SETTLES ON → ROBINHOOD CHAIN · 'COVERAGE TARGETS. NOT AFFILIATED.'

CAPTION

Where tokenized collateral lives.

Lending markets, vaults and curators on top, with a settlement layer underneath. Collatera tracks risk across the stack.

(Coverage targets, not partners.)

IMAGE GENERATION PROMPT

16:9 diagram in pixel-terminal style: four bordered venue cards in a row (generic icons, names Aave, Euler, Morpho, Sentora), a lime dashed arrow down to a highlighted wide card 'Robinhood Chain · Settlement layer'. Forest-green background, mint text, a small footnote 'Coverage targets shown with public data. Not affiliated.'

Use official logos only if brand guidelines allow; otherwise names only. No @-tags.

ARTICLE

A5 WHERE TOKENIZED COLLATERAL LIVES: THE LENDING STACK, MAPPED

CHANNELS	Blog · X Article
FORMAT	≈280 words · P6 as header
STYLE / REF	Article
OBJECTIVE	Ecosystem explainer; SEO for venue names, without implying partnerships.

DRAFT

WHERE TOKENIZED COLLATERAL LIVES: THE LENDING STACK, MAPPED

Tokenized stocks don't sit still. Once they're on-chain, they flow into a stack of lending venues, and each layer adds its own risk to watch.

Lending markets like Aave and Euler let you borrow against collateral. Aave is the largest on-chain money market; Euler uses modular credit vaults, each with its own LTVs and oracles.

Lending networks like Morpho run isolated, fixed-parameter markets. What matters there is the distance to each market's LLTV and the freshness of its price feed.

Curators like Sentora choose and manage markets on top of Aave and Morpho, so following the curator's markets matters as much as the base protocol.

Underneath, settlement layers matter too. Robinhood Chain, an Arbitrum-based Ethereum L2 built for tokenized stocks, is where tokenized equity collateral trades and settles, and where Morpho-powered lending is live.

Collatera tracks collateral risk across this stack. These venues are coverage targets shown with public data; Collatera isn't affiliated with or endorsed by them, and which protocols are live on Robinhood Chain varies, so always check the venue before relying on it.

Not financial advice.

CAPTION

Where does tokenized collateral actually live?

Markets, vaults, curators, settlement. The lending stack, mapped ↓

WRITING PROMPT

```
Write a ~280-word explainer mapping the lending stack for tokenized collateral, using the site's descriptions of Aave, Euler, Morpho, Sentora and Robinhood Chain verbatim where possible. Include the 'not affiliated' and 'check each venue' caveats. No TVL figures unless freshly sourced.
```

No @-tags of the venues. TVL numbers change; omit them or cite DefiLlama with a date.

VIDEO

V4 YOUR ORACLE IS_ STALE

CHANNELS	X · Instagram Reels · TikTok
FORMAT	25 s · 9:16 1080×1920 + 16:9 · 25 fps
STYLE / REF	CONQUEROR (locked ref #3)
OBJECTIVE	Make staleness and overnight gaps feel urgent, using a phrase-swap format.

SHOT LIST

0–3 s	'Introducing [mascot] Collatera for [Aave → Morpho → Euler → tokenized stocks]': small text in corner crop marks over a soft lime/forest gradient blob.
3–4 s	Pixel-dissolve transition into a lime halftone texture with a huge 'COLLATERA' wordmark.
4–7 s	'Just paste an address' + an input; an Algorand address types; extreme zoom into the caret, then pull back.
7–13 s	White canvas. 'Your oracle is… fresh / 9 min old / 89 min old / stale' with a vignette above each: a clock ring, an oracle-age counter, an 'ORACLE STALE' badge (simulated).
13–17 s	Monitor mockup: the terminal with the order book filling, then the camera glides down to 'Position health'.
17–21 s	Night desktop: notification stack (illustrative): 'Oracle age 89 min on tQQQ', 'Market closed: overnight gap risk', 'Buffer 14.7%: review position'.
21–23 s	'Markets close. Loans don't.'
23–25 s	Black: mascot coin + 'collatera.buzz' typed with a caret.

AUDIO — Original electronic ≈128 BPM, a drop at 7 s, notification blips on beats. -16 LUFS.

CAPTION

Your oracle is… stale. 👀

Markets close. Loans don't. Collatera watches oracle age, buffers and closed-market gaps, read-only.

collatera.buzz

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
In claudemotion, build 'CollateraStale' (25 s, 1080×1920 and 1920×1080, 25 fps) recreating the Conqueror reference (ANALYSIS.md §3) for Collatera: NameCycler, PixelDissolve, halftone texture in lime/forest, ExtremeZoomInput, PhraseSwap 'Your oracle is…', a monitor mockup, and a NotificationStack with illustrative alerts. Original 128 BPM score.
```

> The notifications are illustrative mock-ups. Mark them as such and do not imply live alerts unless the feature has shipped.

ARTICLE

A3 READING YOUR POSITION HEALTH: BUFFER, ORACLE AGE, LTV

CHANNELS	Blog · X Article
FORMAT	≈280 words · annotated screenshot
STYLE / REF	Article
OBJECTIVE	Product education that converts to demo visits.

DRAFT

READING YOUR POSITION HEALTH: BUFFER, ORACLE AGE, LTV

Collatera's terminal ends in one small panel: Position health. Three numbers, each answering a different question.

Buffer: how far are you from liquidation? It's the distance between where your collateral is valued now and the threshold where the protocol can liquidate. Bigger is calmer. In our simulated demo it reads 14.7%.

Oracle age: how old is the price that number is based on? A buffer is only as good as the price under it. If the oracle last updated 89 minutes ago (again, simulated), the buffer is describing the past.

LTV: how much have you borrowed against what you've posted? Loan-to-value rises when collateral falls or debt grows. Each market sets its own maximum.

Read them together. A healthy buffer with a fresh oracle is one situation. The same buffer with an old oracle and a closed underlying market is a very different one. That's why Collatera shows price, oracle age and the liquidation line side by side.

Try the read-only demo at collatera.buzz/app. Paste any Algorand address or use a sample. No keys, no signatures.

Not financial advice.

CAPTION

Buffer. Oracle age. LTV.

Three numbers, three different questions. How to read Collatera's position health panel ↓

WRITING PROMPT

```
Write a ~280-word explainer 'Reading your position health: buffer, oracle age, LTV' using the simulated demo values (Buffer 14.7%, Oracle age 89 min, LTV 39.8%) clearly labelled as simulated. Define each, then explain why reading them together matters. CTA: the read-only demo at collatera.buzz/app.
```

> Label the demo values as simulated in the text and the image.

VIDEO

V7 MONITORING FIRST. AUTOMATION LATER.

CHANNELS	X · LinkedIn
FORMAT	20 s · 16:9 · 24/30 fps
STYLE / REF	NOTION AI (locked ref #2)
OBJECTIVE	Trust-building: honest roadmap and token stance.

SHOT LIST

0–3 S	'Monitoring first.' then 'Automation later.', with a hand-drawn underline under 'later.'
3–7 S	Pale-green plate: 'NOW / V1' card. One demo vault modeled on Algorand lending markets · Read-only · No keys, no funds moved, no automatic execution. Check pills tick in.
7–11 S	Butter plate: 'LATER / CONDITIONAL' card. Operators could bond to execute user-authorized jobs, with a scribble annotation: 'NEEDS FUNDING, LEGAL REVIEW, SECURITY CHECKS'.
11–15 S	'Paid usage comes first.' then 'A token is a proposal, not a promise.'
15–18 S	Disclaimer line: 'Tokens do not guarantee returns or value.'
18–20 S	Logo end.

AUDIO Original soft plucks ≈100 BPM, calm. -17 LUFS.

CAPTION

Monitoring first. Automation later.

V1 is read-only: one demo vault modeled on Algorand lending markets. No keys, no funds moved.

A token is a proposal, not a promise. Paid usage comes first.

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

```
In claudemotion, build 'CollateraRoadmap' (20 s, 1920×1080, 30 fps) in the Notion AI reference style: WordType, Underline, PlateWipe, roadmap cards with tick pills, Scribble. Copy verbatim from the site's roadmap and token-role sections.
```

Keep the 'proposal, not a promise' and 'no guarantee' wording intact. No price, yield or token-launch talk.

POST

P8 A TOKEN IS A PROPOSAL, NOT A PROMISE

CHANNELS	X · LinkedIn
FORMAT	1:1 2160×2160
STYLE / REF	Static · statement
OBJECTIVE	Trust and honesty; pairs with V7.

ON-IMAGE COPY

A TOKEN IS A PROPOSAL, / NOT A PROMISE. · PAID USAGE COMES FIRST. · TOKENS DO NOT GUARANTEE RETURNS OR VALUE.

CAPTION

A token is a proposal, not a promise.

Subscriptions and B2B accounts fund monitoring first. Any token role stays a proposal until usage proves it's needed.

IMAGE GENERATION PROMPT

Square minimal poster on light mint paper (#EDF7EA) with a dotted grid. Big dark-green pixel headline 'A TOKEN IS A PROPOSAL, NOT A PROMISE.' and a lime underline under 'PROMISE'. Small monospace line beneath, 'Paid usage comes first.', and a tiny disclaimer at the bottom. The pixel mascot is small in the corner.

Must keep the disclaimer. No price, launch-date or yield talk.

VIDEO

V5 ONE PAGE. EVERY RISK IN VIEW.

CHANNELS	X · LinkedIn · website hero
FORMAT	30 s · 16:9 1920×1080 · 60 fps
STYLE / REF	ACCETERNITY (locked ref #4)
OBJECTIVE	Showcase the whole site/product as a premium fly-over, closing the 15 days.

SHOT LIST

0–8 s	Black. The full collatera.buzz page (hero, terminal, market pulse, integrations, features, roadmap) laid on a tilted plane (rotateX 30°, rotateZ -12°). The camera flies section to section under a spotlight vignette.
8–14 s	Push into the terminal: candles, order book, 'Position health'.
14–19 s	Glide across Market pulse: narrative rows highlight one by one.
19–24 s	Integration cards (Aave / Euler / Morpho / Sentora) on an arc carousel, then a glowing lime wire down to the Robinhood Chain card.
24–27 s	Macro shots: the 'Read-only' chip, the 'Monitor a position' button, the 'Oracle age' value lit by a sweeping white spotlight.
27–30 s	'Collatera. Every risk, in view.' small, centred, then the mascot + wordmark.

AUDIO — Near-silent foley only (whooshes, ticks), or a soft pad. -20 LUFS.

CAPTION

One page. Every risk in view.

Terminal · Market pulse · Integrations · Position health

Read-only monitoring for tokenized-asset-backed loans → collatera.buzz

BUILD PROMPT (CLAUDE + CLAUDEMOTION REPO)

In claudemotion, capture collatera.buzz at 2× with scripts/*/capture_site.mjs (or use supplied screenshots), lay the sections out as one SitePlane and build 'CollateraFlyover' (30 s, 1920×1080, 60 fps) recreating the Acceternity reference (ANALYSIS.md §4): a CameraPath fly-over, a Spotlight mask, an ArcCarousel and GlowWires. Near-silent foley.

> Show the TVL figures only if the capture is fresh, and keep the 'not affiliated' footnote readable in the integration shot.

ARTICLE

A4 MONITORING FIRST, AUTOMATION LATER: HOW WE'RE BUILDING COLLATERA

CHANNELS	Blog · LinkedIn · X Article
FORMAT	≈300 words · founder voice
STYLE / REF	Article
OBJECTIVE	Close the campaign with the principles post.

DRAFT

MONITORING FIRST, AUTOMATION LATER: HOW WE'RE BUILDING COLLATERA

There's a version of Collatera that would be easy to announce: connect your wallet, and we'll manage your collateral for you. We're not building that first, on purpose.

V1 is read-only. One demo vault modeled on Algorand lending markets. You paste an address or connect a wallet, and Collatera reads public data. We never ask for keys or signatures, never move funds, and never execute anything automatically.

Why start there? Because the first problem is awareness: knowing when an oracle is stale, when the underlying market is closed, and how much buffer a gap would eat. That's useful on day one, and it doesn't require anyone to trust us with their money.

Automation may come later, and conditionally. One idea is independent operators bonding to execute jobs users explicitly authorize, earning service fees. That needs funding, legal review and independent security checks before it's real.

The same goes for a token. Paid usage comes first: subscriptions and B2B accounts fund monitoring. Any token role stays a proposal until usage proves a real network need. Tokens don't guarantee returns or value.

Monitoring first. Automation later. Catch stale oracles before they catch you.

Not financial advice.

CAPTION

Monitoring first. Automation later.

Why Collatera starts read-only, and what has to be true before anything else ships ↓

WRITING PROMPT

```
Write a ~300-word founder-voice post 'Monitoring first, automation later: how we're building Collatera'. Use only facts from the site: V1 read-only demo vault on Algorand, no keys/funds/auto-execution; later conditional operator bonding needing funding, legal review and security checks; paid usage first; the token is a proposal, not a promise, with no guaranteed returns. Honest, calm tone.
```

> Have the founder review before publishing.

HOW TO MAKE IT.

VIDEOS

Built in the claudemotion repo with Remotion. Each video recreates one locked whatships reference shot for shot (docs/reference/whatships/ANALYSIS.md). Deliver 16:9 at 1080p or 4K plus a 9:16 cut. Original music per reference genre (80–130 BPM), at -14 to -18 LUFS. Every UI shot labelled SIMULATED DATA.

POSTS

Preferred: build in the repo (src/compositions/CollateraLaunch/Posts.tsx) so type and UI are pixel-exact. The image prompts are for quick concepting in an AI image tool. Always re-set the text in Silkscreen afterwards, because AI tools misspell words. Already produced: P1 (poster), P4 and P7 (in deliverables/collatera-posts/).

ARTICLES

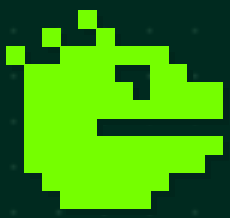

Drafts are publish-ready at about 300 words. Founder review before posting. Header image = the paired post. Publish on X Articles and cross-post to Medium and LinkedIn 24 h later.

HASHTAGS & TAGS

Use 2–3 max on X: #DeFi #RWA #Algorand (#TokenizedStocks where relevant). Do not tag lending venues or chains.

BEFORE ANYTHING GOES LIVE

☐ Alerts / stress test / repayment preview status confirmed · ☐ Algorand testnet vs mainnet wording confirmed · ☐ SIMULATED labels visible · ☐ No partnership implications · ☐ Token copy reviewed · ☐ "Not financial advice." on articles
