ORYN

15-DAY CONTENT CAMPAIGN

Posts + motion-graphics videos + short articles, with generation prompts

8	8	4
POSTS	VIDEOS	ARTICLES

Prepared with Claude Code · Oryn © 2026 · MVP · Simulated issuer data · Not investment advice

CAMPAIGN BRIEF

Goal. Introduce Oryn, the state-of-the-asset layer, and teach one idea over 15 days: before you act on a tokenised asset, ask whether it is safe to act, and get one verdict per token, per chain, with a reason and the evidence.

Audience (assumption, please confirm)

- Builders and integrators who consume tokenised real-world-asset data (lending, DEX, wallet and vault teams).
- Risk and ops teams holding tokenised stocks, funds and treasuries as collateral or inventory.
- RWA-curious DeFi users who need a plain-English reason, not a pile of fields.

Content pillars

Pillar	Pieces	What it does
Launch	2	Name the product and the question it answers.
Product	11	Show verdicts, Guard, Time Machine, Lookahead, multi-chain, tour.
Education	5	Teach the six verdicts and the common mistakes (market closed vs stale).
Thought leadership	2	Price is not a verdict; a bond is not an asset; unknown means not actionable.

Voice

- Plain, confident, precise. Short sentences. Say the reason, not the hype.
- Never give investment advice. Never claim audits, TVL, users, partners or live data we cannot show.
- Every post that shows a verdict carries a verbatim reason from the board.

Visual system

- Posts: cream paper #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, deep green #1d3a24. Fonts Anton (display), Space Grotesk (text), Space Mono (labels).
- Videos: ONLY the motion grammar of the five reference films: words blur in/out and swap in place; cursor or caret drives the story; one idea per beat on one flat colour or one tilted dark plane; UI cards rise in from below; logos float and cluster; code types on; end on a centred logo plus one line. No wipes, stamps or shakes.
- Specs: videos 3840x2160 (16:9) at 60 fps; posts 1080x1350 designed, delivered 2160x2700 JPEG; articles ~200-220 words.

FACT BANK (USE ONLY THESE)

Every number and sentence in this plan comes from the Oryn board. If a post needs a fact that is not here, add it to this list first, then use it.

Topic	Verbatim fact
Product line	ORYN · State-of-the-asset layer · “Is it safe to act on this token right now?”
Core promise	One verdict per token, per chain. A reason. The evidence. Branch on a single value instead of a pile of fields.
Board totals	15 deployments. Open 1 · Market closed 5 · Action pending 2 · Redemption closed 2 · Stale 1 · Divergent 4. “1/15 deployments actionable now.” NYSE closed, opens in 6h.
Six verdicts	Open: Redemptions open, NAV fresh, onchain state matches issuer. Market closed: Underlying exchange is closed; oracle price is frozen at the last close, as expected. Action pending: event not yet applied onchain. Redemption closed: Fund redemption window is shut; collateral cannot be redeemed at published NAV. Stale: Arbitrum head is not advancing. Not a market closure; do not treat as a weekend freeze. Divergent: issuer event not applied onchain.
Divergent examples	xTSLA on Solana: Stock split 3:1 not applied on Solana. oNFLX on Ethereum and Base: Stock split 10:1 not applied. oQQQ on Base: DEX price drifting above reference on Base.
Action pending	xAAPL on Ethereum and Solana: Dividend $0.27 / share · effective 2026-10-27 22:00 UTC · multiplier not yet applied. Event effective in 38h.
Other deployments	oNVDA (ETH, BASE) market closed, opens in 6h. dMSFT on BASE market closed; on ARB stale. BUIDL (ETH, ARB) redemption closed, window opens in 6h. USTB (ETH) open, NAV strike in 13h.
Sections	01 Board · 02 Asset · 03 Lookahead · 04 Divergence · 05 Wallet · 06 Guard · 07 API
Time machine	Replay any moment. Verdicts, calendar and alerts all follow. Stops: -1D, NOW, NEXT OPEN, +1D. Site shows +41.25h and 26/10/26 07:59.
Principles	Unknown means not actionable. A bond proves skin in the game, not that an offchain asset exists.
Footer	ORYN © 2026 · MVP · Simulated issuer data · Not investment advice
Issuer models	Rebasing (Backed xStocks), Total-return (Ondo Global Markets), Stablecoin (Dinari dShares), NAV (Securitize BUIDL, Superstate USTB).

15-DAY CALENDAR

DAY	ID	TYPE	TITLE	PILLAR	FORMAT
1	P1	Post	Hero: Is it safe to act?	Launch	4:5
1	V1	Video	Introducing Oryn	Launch	30 s
2	P2	Post (carousel, 7 slides)	The six verdicts	Education	4:5
3	A1	Article (short)	Price is not a verdict	Thought leadership	~220 words
4	V2	Video	Divergent: when a split is not applied	Product	20 s
5	P3	Post	xTSLA Divergent	Product	4:5
6	V3	Video	Replay any moment	Product	15 s
7	P4	Post	Market closed is not broken	Education	4:5
8	A2	Article (short)	How to read a frozen price	Education	~200 words
9	P5	Post	BLOCKED	Product	4:5
9	V4	Video	The Guard	Product	20 s
10	V5	Video	Same token, different chain	Product	25 s
11	P6	Post	Stale is not a weekend	Education	4:5
12	P7	Post	Action pending	Product	4:5
12	V6	Video	Action pending: the dividend	Product	20 s
13	A3	Article (short)	When the redemption window is shut	Education	~200 words
14	P8	Post (carousel, 5 slides)	Three clocks	Product	4:5
14	V7	Video	Four chains, one verdict	Product	20 s
15	A4	Article (short)	A bond is not an asset	Thought leadership	~220 words
15	V8	Video	Oryn tour (one-take)	Product	45 s

Cadence: post the video first on its day, then the matching post 3-4 hours later. Articles go out in the morning with a carousel or post as the cover image. Day 15 closes with the full product tour and the principle article.

HOW TO USE THE PROMPTS

- Videos: paste the prompt into Claude Code inside the claudemotion repo. It already contains the playbook rules, palette, spec and the allowed facts. Review stills first, then render.
- Posts: the preferred route is the OrynPosts composition (exact logo and type). The image-generation prompts are for exploring layouts or when a design tool is needed.
- Articles: paste the writing prompt into Claude. It lists the only facts allowed.
- After generating anything, check it against the Fact Bank before publishing.

Master prompts (reusable)

VIDEO

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: build a [N]-second film at 3840x2160/60 fps titled [TITLE] in the style of reference film [Krea | Notion | Conqueror | Pages | Supabase]. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Facts allowed: [PASTE FROM FACT BANK]. Shots: [LIST WITH TIMES]. Deliver: contact sheet of stills, then the MP4, with ffprobe and loudness check.
```

POST

```
Design one Oryn social post (4:5, 1080x1350, delivered 2160x2700). Palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee. Anton headline, Space Grotesk body, Space Mono labels, thick black outline cards with hard offset shadow, one idea, generous negative space, no photos, no gradients, no invented data. Copy: [PASTE VERBATIM].
```

ARTICLE

```
Write a [200-220]-word article titled [TITLE] for Oryn. Audience: builders and risk teams working with tokenised real-world assets. Tone: calm, precise, no hype, no advice. Use ONLY these facts: [PASTE FROM FACT BANK]. Structure: hook, problem, two or three real examples, one-line close. End with: Simulated issuer data · Not investment advice.
```

DAY 1	P1 · POST	LAUNCH

Hero: Is it safe to act?

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Krea / Conqueror flat-canvas typography
Objective	Pin post for the profile. States the question Oryn answers.

ON-IMAGE COPY

- Headline: IS IT SAFE TO ACT? (blue, SAFE outlined)
- Sub: One verdict per token, per chain. A reason. The evidence.
- Badge top-left, footer: Oryn · State of assets activated · 01/06

CAPTION / POST COPY

Price tells you what a token is worth. It doesn't tell you if it's safe to act. That's the question Oryn answers: one verdict per token, per chain, with a reason and the evidence.

#Oryn #RWA #Tokenization

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

```
Image-generation prompt: Flat editorial poster, 4:5, warm cream paper (#e4dfca) with a faint cyan
halftone-dot bloom behind the text, huge condensed grotesque headline "IS IT SAFE TO ACT?" in royal blue
(#2630c8) with SAFE as outline lettering, small round badge logo top-left, one line of body copy
bottom-left, generous negative space, no gradients, no 3D, no extra text. Preferred route: render with
Remotion (composition OrynPosts, frame 0) so the logo and type are exact; use an image model only for
exploring layouts.
```

DAY 1	V1 · VIDEO	LAUNCH

Introducing Oryn

Format	30 s, 16:9, 3840x2160 @ 60 fps, music + SFX, no VO
Reference	Conqueror (Introducing X for ...) + Krea (cursor, leaderboard)
Objective	Announce Oryn and explain the product in one sentence.

SHOT LIST

- 0-4 s “Introducing Oryn for”; the last word swaps in place: xTSLA / oNVDA / BUIDL / USTB (blur out, blur in). Flat cream, soft halftone bloom.
- 4-9 s Cursor draws a rounded card; text swaps: “Is it safe to act on this token right now?”
- 9-18 s Board leaderboard of 8 deployments rises in; cursor clicks xTSLA·SOL, row becomes a black pill: Divergent. Stock split 3:1 not applied on Solana.
- 18-25 s “One verdict per token, per chain.” then “A reason. The evidence.” swapped in place.
- 25-30 s Centred Oryn badge, line: “State of assets activated.” Footer: Simulated issuer data · Not investment advice.

CAPTION / POST COPY

Introducing Oryn. The state-of-the-asset layer. One verdict per token, per chain, with a reason and the evidence. Is it safe to act on this token right now? Now you can branch on one value.

#Oryn #RWA #Tokenization #DeFi #OnchainFinance

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: build the 30 s film “Introducing Oryn” at 3840x2160, 60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Scenes: (1) “Introducing Oryn for [xTSLA|oNVDA|BUIDL|USTB]” with in-place word swap on a cream blurred halftone background; (2) a cursor draws a prompt card with the line “Is it safe to act on this token right now?”; (3) an 8-row leaderboard of Oryn deployments rises in, the cursor selects xTSLA SOL and the row becomes a black pill reading Divergent with the reason text; (4) in-place swaps: “One verdict per token, per chain.” / “A reason. The evidence.”; (5) centred badge from public/oryn/img/logo.png, line “State of assets activated.” Original 96 BPM music, soft UI ticks, no wipes or stamps.
```

DAY 2	P2 · POST (CAROUSEL, 7 SLIDES)	EDUCATION

The six verdicts

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94 per slide
Reference	Notion (one flat colour per idea)
Objective	Teach the verdict vocabulary so every later post makes sense.

ON-IMAGE COPY

- Slide 1 cover: “Six verdicts. One value.”
- Slide 2 Open (green): Redemptions open, NAV fresh, onchain state matches issuer.
- Slide 3 Market closed (cream/blue): Underlying exchange is closed; oracle price is frozen at the last close, as expected.
- Slide 4 Action pending (yellow): event not yet applied onchain, e.g. xAAPL dividend $0.27 / share.
- Slide 5 Redemption closed (red): Fund redemption window is shut; collateral cannot be redeemed at published NAV.
- Slide 6 Stale (lavender): Arbitrum head is not advancing. Not a market closure.
- Slide 7 Divergent (black/red): issuer event not applied onchain, e.g. Stock split 3:1 not applied on Solana.

CAPTION / POST COPY

Six verdicts. Open, Market closed, Action pending, Redemption closed, Stale, Divergent. Swipe for what each one means and why “market closed” is not the same as “broken”.

#Oryn #RWA #DeFi #RiskManagement

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

Image-generation prompt (per slide): Flat 4:5 poster on a single solid colour (slide 2 deep green #1d3a24, slide 3 cream, slide 4 yellow #f2c200, slide 5 red #e5321f, slide 6 lavender #b9b3ee, slide 7 near-black), one condensed grotesque word as the headline, a rounded pill chip with the verdict label, two lines of monospace reason text, thick black outline and hard offset shadow on the card, no photos. Preferred route: extend the OrynPosts composition (one frame per slide) so copy stays verbatim.

DAY 3	A1 · ARTICLE (SHORT)	THOUGHT LEADERSHIP

Price is not a verdict

Format	~220 words, blog / LinkedIn / X article, 1 hero post image
Reference	-
Objective	Frame the category: state-of-the-asset vs price feeds.

OUTLINE / KEY POINTS

- Hook: A price feed answers one question. Is it safe to act answers another.
- Body: A tokenised stock can show a perfectly normal price while the exchange is closed, a split has not been applied on one chain, or a fund's redemption window is shut. Each looks like "fine" to a price-only integration.
- Examples (from Oryn board): xTSLA on Solana is Divergent because a 3:1 split is not applied. BUIDL is Redemption closed because the window is shut. dMSFT on Arbitrum is Stale because the chain head is not advancing.
- Close: Oryn collapses this into one value per token, per chain, plus the reason and evidence. Unknown means not actionable.

CAPTION / POST COPY

New post: why a price feed can look healthy while the token isn't safe to act on. Three real examples from the Oryn board.

#Oryn #RWA #Oracles #DeFi

GENERATION PROMPT (CLAUDE)

```
Writing prompt: Write a 220-word article titled "Price is not a verdict" for builders and risk teams working with tokenised real-world assets. Plain, confident, no hype, no financial advice. Use ONLY these facts: xTSLA on Solana is Divergent (Stock split 3:1 not applied on Solana); BUIDL on Ethereum and Arbitrum is Redemption closed (window opens in 6h); dMSFT on Arbitrum is Stale (head not advancing, not a market closure); principle: Unknown means not actionable. Structure: hook, the problem, three examples, one-line close. End with: Simulated issuer data · Not investment advice. Do not invent statistics, customers or partners.
```

DAY 4	V2 · VIDEO	PRODUCT

Divergent: when a split is not applied

Format	20 s, 16:9, 3840x2160 @ 60 fps
Reference	Notion (flat colour per idea) + Krea (cursor)
Objective	Show the most dramatic verdict with a real example.

SHOT LIST

- 0-4 s Flat cream. “A stock split is announced.” swaps to “The issuer applies it.”
- 4-9 s Two chain cards slide up: Ethereum and Solana. Cursor points at Solana.
- 9-15 s Background cross-fades to near-black. Pill: Divergent. “Stock split 3:1 not applied on Solana.”
- 15-20 s “One chain behind. Oryn catches it.” Badge end card.

CAPTION / POST COPY

The issuer split the stock 3:1. Solana didn’t get the memo. That’s a Divergent verdict. Oryn flags it before you act.

#Oryn #xStocks #RWA #OnchainRisk

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 20 s film at 3840x2160/60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Use the xTSLA example only (Stock split 3:1 not applied on Solana; next change unknown). Colour sequence: cream, then near-black with red type. Include a typing caret on the reason line. No invented numbers beyond 3:1.
```

DAY 5	P3 · POST	PRODUCT

xTSLA Divergent

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Conqueror (flat, high contrast)
Objective	Single strong example of Divergent.

ON-IMAGE COPY

- Huge red xTSLA on near-black
- Pill: Divergent · 1 mismatch
- Stock split 3:1 not applied on Solana.
- Next change: unknown

CAPTION / POST COPY

xTSLA on Solana. Divergent. Stock split 3:1 not applied on Solana. Next change unknown. Unknown means not actionable.

#Oryn #xTSLA #RWA

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

Image-generation prompt: Near-black 4:5 poster with faint diagonal red hatching, gigantic condensed grotesque word “xTSLA” in signal red (#e5321f), a red pill reading DIVERGENT, one bold sentence “Stock split 3:1 not applied on Solana.”, a thin red barcode along the bottom, no photos. Preferred: OrynPosts frame 2 (already built).

DAY 6	V3 · VIDEO	PRODUCT

Replay any moment

Format	15 s, 16:9, 3840x2160 @ 60 fps
Reference	Pages. (tilted plane, depth blur)
Objective	Show the Time Machine.

SHOT LIST

- 0-3 s Dark plane tilts into view with the board cards. Title swaps: “Replay” / “any moment.”
- 3-11 s Cursor drags the slider across -1D, NOW, NEXT OPEN, +1D; cards re-colour as it moves (Illustrative state changes).
- 11-15 s Plane levels out. “Verdicts, calendar and alerts all follow.” Badge end.

CAPTION / POST COPY

Time Machine. Replay any moment and the verdicts, calendar and alerts all follow.

#Oryn #TimeMachine #RWA

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 15 s film at 3840x2160/60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Dark mode plane with perspective tilt (rotateX 8 deg, rotateY -10 deg) and depth-of-field blur on far cards. The slider labels are -1D, NOW, NEXT OPEN, +1D and the +41.25h readout from the site. Card state changes while scrubbing are Illustrative and must carry a small Illustrative tag.
```

DAY 7	P4 · POST	EDUCATION

Market closed is not broken

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Notion (flat colour, one message)
Objective	Prevent false alarms; builds trust.

ON-IMAGE COPY

- Headline: MARKET CLOSED. NOT BROKEN.
- Body: Underlying exchange is closed; oracle price is frozen at the last close, as expected.
- Chip: Market closed · market opens in 6h

CAPTION / POST COPY

A frozen oracle price on a closed market is expected. Oryn labels it Market closed so you don't treat a quiet price as a problem.

#Oryn #RWA #Oracles

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

Image-generation prompt: 4:5 poster, solid royal blue background, cream condensed headline "MARKET CLOSED. NOT BROKEN.", a cream rounded card with a blue Market closed pill and two lines of monospace text, hard black offset shadow, no photos. Preferred: extend OrynPosts.

DAY 8	A2 · ARTICLE (SHORT)	EDUCATION

How to read a frozen price

Format	~200 words
Reference	-
Objective	Explain Market closed vs Stale, a common mistake.

OUTLINE / KEY POINTS

- Hook: Two things look identical on a chart: a flat line because the market is closed, and a flat line because the chain stopped.
- Market closed: Underlying exchange is closed; oracle price is frozen at the last close, as expected. oNVDA and oQQQ on Ethereum opens in 6h.
- Stale: Arbitrum head is not advancing. Not a market closure; do not treat as a weekend freeze. (dMSFT on Arbitrum.)
- Close: One verdict, two very different next steps.

CAPTION / POST COPY

Flat price? Check why. Market closed and Stale look the same on a chart and mean opposite things.

#Oryn #RWA #OnchainRisk

GENERATION PROMPT (CLAUDE)

```
Writing prompt: Write a 200-word explainer “How to read a frozen price”. Contrast Market closed
(Underlying exchange is closed; oracle price is frozen at the last close, as expected; market opens in
6h) with Stale (Arbitrum head is not advancing; not a market closure; do not treat as a weekend freeze).
Use dMSFT on Base (Market closed) vs dMSFT on Arbitrum (Stale) as the paired example. No advice, no
invented data. End with the footer line.
```

DAY 9	P5 · POST	PRODUCT

BLOCKED

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Conqueror (bold single message)
Objective	Memorable one-word post for the Guard.

ON-IMAGE COPY

- Headline: BLOCKED.
- Sub: xTSLA · SOL · Divergent
- Line: Stock split 3:1 not applied on Solana.

CAPTION / POST COPY

xTSLA on Solana. Result from the Guard: BLOCKED.

#Oryn #Guard

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

```
Image-generation prompt: 4:5 poster, red background (#e5321f), giant cream condensed word “BLOCKED.”, small black pill with white text “xTSLA · SOL · DIVERGENT”, one sentence in monospace, hard shadow, no photos.
```

DAY 9	V4 · VIDEO	PRODUCT

The Guard

Format	20 s, 16:9, 3840x2160 @ 60 fps
Reference	Notion agents (prompt box, flat colour) + Supabase (typing)
Objective	Show the decision-point product: check before you act.

SHOT LIST

- 0-4 s Flat yellow. “Before you swap,” swaps to “ask the Guard.”
- 4-10 s Form card rises in; caret types Token: xTSLA, Chain: SOL, Action: Swap.
- 10-15 s Background cuts via colour change to red; result card: BLOCKED. Stock split 3:1 not applied on Solana.
- 15-20 s “Unknown means not actionable.” Badge end.

CAPTION / POST COPY

The Guard. Type the token and chain, get a verdict before you act. xTSLA on Solana: BLOCKED.

#Oryn #Guard #RWA

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 20 s film at 3840x2160/60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. The form values (xTSLA, SOL, Swap) are Illustrative. The result text is taken from the Oryn board. Typing caret, send button pulse, one flat-colour change per idea.
```

DAY 10	V5 · VIDEO	PRODUCT

Same token, different chain

Format	25 s, 16:9, 3840x2160 @ 60 fps
Reference	Krea 3 (leaderboard rows, black pill)
Objective	Show per-chain verdicts: xTSLA ETH vs SOL.

SHOT LIST

- 0-5 s “Same token.” / “Different chain.” swapped in place.
- 5-14 s Two rows rise: xTSLA·ETH Market closed, xTSLA·SOL Divergent; black pill highlight moves between them with the cursor.
- 14-22 s Reason lines type on for each.
- 22-25 s “One verdict per token, per chain.” Badge.

CAPTION / POST COPY

Same token. Different chain. Different answer. xTSLA is Market closed on Ethereum and Divergent on Solana.

#Oryn #xStocks #MultiChain

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 25 s film at 3840x2160/60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Leaderboard table styled like the Krea reference: white-card rows, black pill on the highlighted row, cursor moves between rows. Data: xTSLA ETH Market closed (market opens in 6h), xTSLA SOL Divergent (Stock split 3:1 not applied on Solana).
```

DAY 11	P6 · POST	EDUCATION

Stale is not a weekend

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Notion
Objective	Highlight the Stale verdict.

ON-IMAGE COPY

- Headline: STALE IS NOT A WEEKEND
- Body: Arbitrum head is not advancing. Not a market closure; do not treat as a weekend freeze.
- Chip: dMSFT · ARB · Stale

CAPTION / POST COPY

A chain that stops advancing isn't a market holiday. dMSFT on Arbitrum is Stale.

#Oryn #Arbitrum #RWA

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

Image-generation prompt: 4:5 poster, lavender background (#b9b3ee), black condensed headline, one rounded card with black pill "STALE" and two lines of monospace text.

DAY 12	P7 · POST	PRODUCT

Action pending

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94
Reference	Conqueror
Objective	Static version of the Lookahead story.

ON-IMAGE COPY

- Headline: XAAPL. ACTION PENDING.
- Dividend $0.27 / share · effective 2026-10-27 22:00 UTC
- Multiplier not yet applied · event effective in 38h

CAPTION / POST COPY

Know what's coming before it lands. xAAPL: Action pending. Dividend $0.27 per share, effective 2026-10-27 22:00 UTC.

#Oryn #xAAPL

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

```
Image-generation prompt: 4:5 poster on yellow (#f2c200), huge blue condensed "xAAPL", a black pill
"ACTION PENDING" in yellow text, three monospace lines, barcode, hard shadow.
```

DAY 12	V6 · VIDEO	PRODUCT

Action pending: the dividend

Format	20 s, 16:9, 3840x2160 @ 60 fps
Reference	Conqueror (cycling lines, mini cards)
Objective	Teach Lookahead: events before they land.

SHOT LIST

- 0-5 s “A dividend is coming.” swaps to “Is your multiplier ready?”
- 5-12 s Mini calendar card: effective 2026-10-27 22:00 UTC. Row xAAPL·ETH Action pending.
- 12-17 s Countdown chip “event effective in 38h”.
- 17-20 s “Dividend $0.27 / share. Multiplier not yet applied.” Badge.

CAPTION / POST COPY

Dividend $0.27 per share, effective 2026-10-27 22:00 UTC, multiplier not yet applied on Ethereum or Solana. That’s Action pending.

#Oryn #xAAPL #Lookahead

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 20 s film at 3840x2160/60 fps on a flat yellow background. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. Use only the xAAPL dividend facts: $0.27 / share, effective 2026-10-27 22:00 UTC, multiplier not yet applied on Ethereum and Solana, event effective in 38h. The calendar card is a simplified Illustrative UI.
```

DAY 13	A3 · ARTICLE (SHORT)	EDUCATION

When the redemption window is shut

Format	~200 words
Reference	-
Objective	Explain Redemption closed with BUIDL.

OUTLINE / KEY POINTS

- Hook: A NAV is only useful if you can redeem at it.
- Fund redemption window is shut; collateral cannot be redeemed at published NAV. BUIDL on Ethereum and Arbitrum: window opens in 6h.
- Contrast: USTB on Ethereum is Open. Redemptions open, NAV fresh, onchain state matches issuer. NAV strike in 13h.
- Close: For anyone using these as collateral, the question isn't the NAV, it's whether you can redeem at it.

CAPTION / POST COPY

Published NAV is not the same as redeemable NAV. BUIDL: Redemption closed. USTB: Open.

#Oryn #BUIDL #USTB #RWA

GENERATION PROMPT (CLAUDE)

```
Writing prompt: Write a 200-word article "When the redemption window is shut" for collateral and risk teams. Facts allowed: BUIDL (BlackRock USD Institutional Digital Liquidity Fund) on Ethereum and Arbitrum is Redemption closed, window opens in 6h; USTB (Superstate Short Duration US Gov Securities Fund) on Ethereum is Open, NAV strike in 13h. Explain why NAV is not the same as redeemable NAV. No advice, no invented figures. End with the footer line.
```

DAY 14	P8 · POST (CAROUSEL, 5 SLIDES)	PRODUCT

Three clocks

Format	4:5, 1080x1350 design canvas, rendered at 2x (2160x2700) as JPEG q94 per slide
Reference	Notion
Objective	Teach that an asset has several clocks to watch.

ON-IMAGE COPY

- Slide 1: Three clocks. One verdict.
- Slide 2: Market clock: market opens in 6h.
- Slide 3: Event clock: event effective in 38h (xAAPL dividend).
- Slide 4: Fund clock: redemption window opens in 6h / NAV strike in 13h.
- Slide 5: Oryn merges them into one value.

CAPTION / POST COPY

Every tokenised asset runs on more than one clock: the market, the corporate event, the fund window. Oryn reads them all and returns one verdict.

#Oryn #RWA #Lookahead

GENERATION PROMPT (IMAGE TOOL, OR OrynPosts IN REMOTION)

```
Image-generation prompt (per slide): flat 4:5 slides, one solid colour per slide (cream, blue, yellow, red, cream), huge condensed clock-time number as the hero (6h, 38h, 6h/13h), a small caption in monospace, thick black outline cards with hard shadow, no clock illustrations.
```

DAY 14	V7 · VIDEO	PRODUCT

Four chains, one verdict

Format	20 s, 16:9, 3840x2160 @ 60 fps
Reference	Supabase Middleware (icon carousel, in-place swaps)
Objective	Multi-chain coverage story.

SHOT LIST

- 0-4 s “Introducing per-chain verdicts”.
- 4-13 s Right-hand icon carousel cycles ETH, SOL, BASE, ARB; text swaps: “Check it on Ethereum / Solana / Base / Arbitrum.”
- 13-17 s Icons cluster, “All of them.”
- 17-20 s Badge + “One verdict per token, per chain.”

CAPTION / POST COPY

Ethereum, Solana, Base, Arbitrum. One verdict per token, per chain.

#Oryn #Ethereum #Solana #Base #Arbitrum

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 20 s dark-mode film at 3840x2160/60 fps in the Supabase style: near-black background, vertical icon carousel on the right, headline words swapped in place (Ethereum, Solana, Base, Arbitrum, all of them). Chain icons are simple Illustrative glyphs; do not use official chain logos unless supplied.
```

DAY 15	A4 · ARTICLE (SHORT)	THOUGHT LEADERSHIP

A bond is not an asset

Format	~220 words
Reference	-
Objective	Share Oryn's view on trust: proofs vs existence.

OUTLINE / KEY POINTS

- Hook: A bond proves skin in the game, not that an offchain asset exists.
- Body: Tokenised assets promise exposure to something offchain. Collateral posted by an issuer shows commitment; it does not show the underlying exists or that onchain state matches it.
- What Oryn does: compare onchain state to issuer state and say so: Open (matches), Divergent (does not), or Unknown (not actionable).
- Close: Unknown means not actionable.

CAPTION / POST COPY

A bond proves skin in the game, not that an offchain asset exists. Here's how we think about verifying tokenised assets.

#Oryn #RWA #Trust

GENERATION PROMPT (CLAUDE)

```
Writing prompt: Write a 220-word opinion piece "A bond is not an asset" from Oryn's perspective. Use these two principles verbatim: "A bond proves skin in the game, not that an offchain asset exists." and "Unknown means not actionable." Tone: calm, precise, no hype. No claims about audits, customers, TVL or partnerships. End with the footer line.
```

DAY 15	V8 · VIDEO	PRODUCT

Oryn tour (one-take)

Format	45 s, 16:9, 3840x2160 @ 60 fps, near-silent music bed
Reference	Pages. (one-take tilted 3D plane)
Objective	Flagship product tour: all seven sections.

SHOT LIST

- 0-6 s Dark plane: Board cards. 6-12 s Asset detail xTSLA. 12-18 s Lookahead calendar. 18-24 s Divergence list (4 divergent). 24-30 s Wallet. 30-36 s Guard BLOCKED. 36-42 s API panel (Illustrative). 42-45 s Spotlight on badge: “State of assets activated.”

CAPTION / POST COPY

Seven sections, one verdict: Board, Asset, Lookahead, Divergence, Wallet, Guard, API.

#Oryn #ProductTour

GENERATION PROMPT (CLAUDE CODE / REMOTION)

```
You are working in the claudemotion repo (Remotion 4, Python audio) and must follow docs/PLAYBOOK.md and the standing style rule in AGENTS.md. Use real Oryn data only and label anything mocked “Illustrative”. Fonts Anton / Space Grotesk / Space Mono (self-hosted), palette cream #e4dfca, ink #0d0d0f, blue #2630c8, yellow #f2c200, red #e5321f, lavender #b9b3ee, green #1d3a24. Build one component per shot, drive everything from the frame number, write timeline.json, generate the music/SFX from the same timeline, lint, render stills for a contact sheet, then render and verify with ffprobe and ebur128. Task: 45 s one-take film at 3840x2160/60 fps. Video style (standing rule): follow ONLY the motion grammar of the five reference films (Krea 3, Notion agents, Conqueror, “Pages.”, Supabase Middleware): headline words blur in/out and are swapped in place, a cursor or typing caret drives the story, one idea per beat on one flat colour or one tilted dark plane, UI cards rise in from below with soft shadows, logos/icons float and cluster, code types on, end on a centred logo plus one line. No other transitions, wipes, stamps or shakes. One continuous camera across a tilted dark 3D plane of Oryn UI cards (perspective 2400px, rotateX 10, rotateY -12), spotlight reveal on each section, depth blur on far cards, no hard cuts. Use the real recording at public/oryn/clips/site.mp4 inside one card for authenticity. API panel is Illustrative: show only a verdict value, not an invented schema.
```

BEFORE YOU PUBLISH

Things to verify

- The board says “Live verdicts”, while the footer says “MVP · Simulated issuer data”. Pick one honest framing for public copy. This plan uses “verdicts” and carries the footer disclaimer.
- Times such as “opens in 6h”, “event effective in 38h” and the Time Machine date are snapshots from the board; refresh them or drop the countdowns if posting on a different day.
- Issuer and chain names (Backed xStocks, Ondo Global Markets, Dinari dShares, Securitize, Superstate; Ethereum, Solana, Base, Arbitrum): confirm you may name them, and do not use their official logos unless supplied.
- X handle, website URL and hashtags: confirm before scheduling (not supplied).
- Time Machine state changes, form values in the Guard and the API panel in V8 are Illustrative and must say so on screen.
- Fonts are lookalikes (Anton, Space Grotesk, Space Mono). Send the brand fonts if you want an exact match.

Production order (suggested)

- Week 1 builds: V1, P1, P2, V2, P3, V3 (days 1-6).
- Week 2 builds: P4, A2, V4, P5, V5, P6, V6, P7.
- Week 3 builds: A3, V7, P8, V8, A4. Videos render in 15-40 minutes each at 4K/60 on 4 cores; start renders in the background.

Metrics to track (no targets assumed)

- Per piece: views, saves, shares, profile visits, link clicks. Per week: follower change, replies asking about a specific verdict.
- Set targets after week 1 using your own baseline; this plan does not assume any.
